BOSTON COLLEGE GREEN LINE MBTA TERMINAL CHESTNUT HILL, MA

Stull and Lee, Inc., was responsible for the architectural concept for a proposed terminal station for the MBTA Boston College line in Chestnut Hill. The existing single platform will be expanded to a dual track, dual platform arrangement, tripling the capacity and yielding the capability to handle large stadium crowds as well as serving as a recognizable destination. The station will include a full canopy over the inbound platform, track relocation, installation of a diamond crossover, a mini-high and two portable lifts, and upgrades to all power, signal and communications systems. Over 2,300 daily patrons of this station and residents will safely cross the Commonwealth Ave./Lake Street corridor via the fully accessible sidewalks and crosswalks, and new traffic signals. Vehicular movements will benefit from fewer train movements.
